1.1 TRAFFIC ANALYSIS

1 INTRODUCTION

The Port Authority of Valencia (PAV) handled a total of 57,784,702 tonnes in 2009, which represents a 3.3% drop compared with figures for 2008. 3,653,890 TEUs were handled during 2009, i.e. 1.44% up on the previous year.

Against a backdrop of widespread economic recession, total port traffic and container traffic results in the PAV were satisfactory. Container throughput in general increased slightly thanks to increased transhipments, although export and import traffic fell as a result of the aforementioned crisis. The PAV has thus consolidated its position as the Mediterranean's leading port and one of the main hub ports in Europe and the world.

A breakdown of goods traffic reveals that liquid bulk fell by 3.4% to 5,766,790 tonnes, solid bulk went down by 31.4% to 3,523,706 tonnes, conventional general cargo dropped by 20.4% to 5,730,157 tonnes whilst container traffic rose by 3.3% to a total of 42,481,666 tonnes.

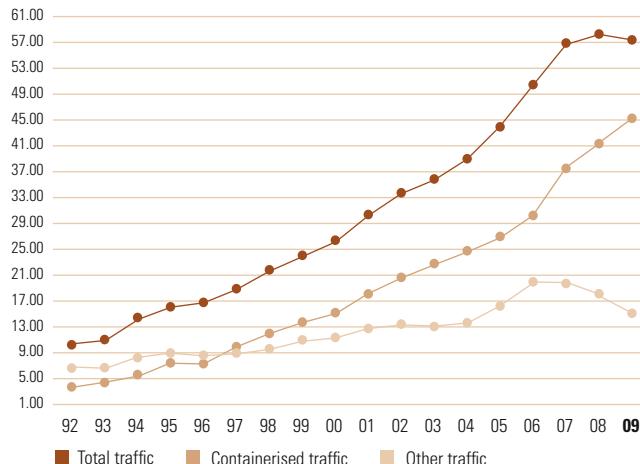

The chart below shows the evolution of the three ports which make up the Port Authority of Valencia:

2 PASSENGER FERRIES AND CRUISE SHIPS

Regular passenger ferries. 2009 saw regular passenger ferries run between the Port of Valencia and the Balearic Islands. These were operated by Trasmediterránea (Ibiza, Mahon and Palma de Majorca), Iscomar (Palma de Majorca) and Balearia (Palma de Majorca).

Regular ferry traffic totalled 247,008 passengers in 2009, an increase of 4.36% compared to the previous year.

Balearic Islands	246,344	234,771	11,573	4.92
Italy	664	1,906	-1,242	-65.2
TOTAL REGULAR PASSENGER FERRIES	247,008	236,677	10,331	4.36

Cruise ships. The number of cruise ship passengers fell by 12.28% over 2008 to 184,909 passengers. The Port of Valencia was the home port for 97,189 passengers whilst 87,720 were transit passengers.

3 VESSEL TRAFFIC

A total of 6,806 vessels called at the PAV's ports in 2009. This represents a 2.6% drop compared to 2008. Gross tonnage in 2009 rose to 177 million, i.e. an increase of 8.54% over the previous year.

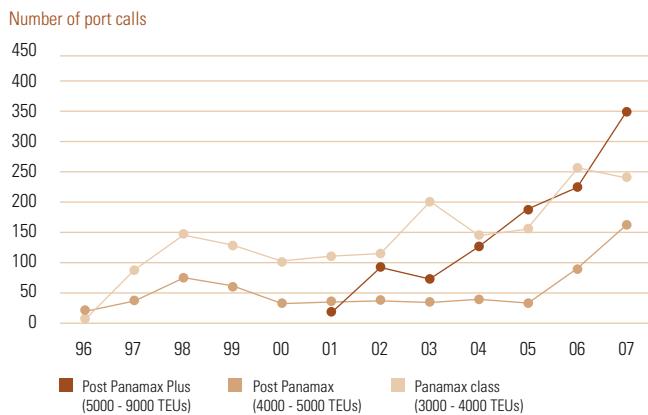

VESSELS (NUMBER)	2009	2008	DIFFERENCE	%
Vessels	6,806	6,988	-182	-2.60
Gross tonnage (thousand tonnes)	177,482	163,522	13,960	8.54

Once again, the average vessel size (measured in G.T.) continued to increase from an average of 23,400 G.T. in 2008 to 26,078 G.T. in 2009. The number of vessels under 25,000 G.T. decreased by 6.86%, although the average G.T. of this group of vessels rose from 10,332 G.T. in 2008 to 11,121 G.T. in 2009, which is a clear sign that the vessels that called into the ports managed by the PAV were larger than in 2008. There was also an increase in average G.T. for vessels over 25,000 G.T. with figures rising to an average 48,558 G.T. in 2009 compared to 44,598 G.T. in 2008.

5 GOODS

Goods traffic is analysed from two different angles in this report. The first analysis centres on actual port throughput, i.e. traffic that involves moving goods and passengers within the port premises, including imports, exports, transit, transhipments and goods tares. The second focuses on foreign and domestic trade and analyses the evolution of imports and exports as well as domestic traffic.

The Port Authority of Valencia is made up of the ports of Valencia, Sagunto and Gandia. However, for the purposes of this study, the PAV will be taken as a single operating unit. Thus, traffic figures will be accumulated for the three ports, although the port the goods belong to may be indicated where relevant.

2.7 TRANSPORT LINKS AND PORT MAPS

2.7.1 INTERNAL TRANSPORT LINKS AND LAND APPROACHES

INTERNAL TRANSPORT LINKS

Roads

The port's internal road network is formed by a main perimetric trunk road from which access roads to the various quays branch off.

The main trunk road is a dual carriageway while access roads to the various quays are single two-way roads.

The internal road layout is shown on the map on the following pages.

Railways

There is a two-track railway which runs parallel to the main road, and like the road, has tracks branching off to the different quays.

Within the port area, the rail tracks are laid on a ballast bed in some parts and they are embedded in concrete in others, depending on whether vehicles need to go over them or not.

The network structure is shown on the map on the following pages.

LAND APPROACHES

By road

The Port of Valencia is connected to the national road network via the CV-30 (Valencia bypass) road.

The CV-30 links up directly to the A-7 motorway (Mediterranean motorway) which in turn is directly joined to the other road links in the port's hinterland:

- The V-21 road to the North (Valencia-Sagunto).
- The North-South axis which includes: the CV-31 (Cartagena-Valencia) road and the A-7 (Barcelona-Algeciras) motorway.
- The East-West axis centred on the A-3 toll-free motorway (Madrid - Valencia).
- The section of the A-7 motorway near Sagunto links up to the A-23 Sagunto-Sompot toll-free motorway which connects the region with Aragon, Castile-Leon and the rest of the north of Spain.

By rail

The rail connection from Valencia ensures access to any production area on the Iberian Peninsula and Europe.

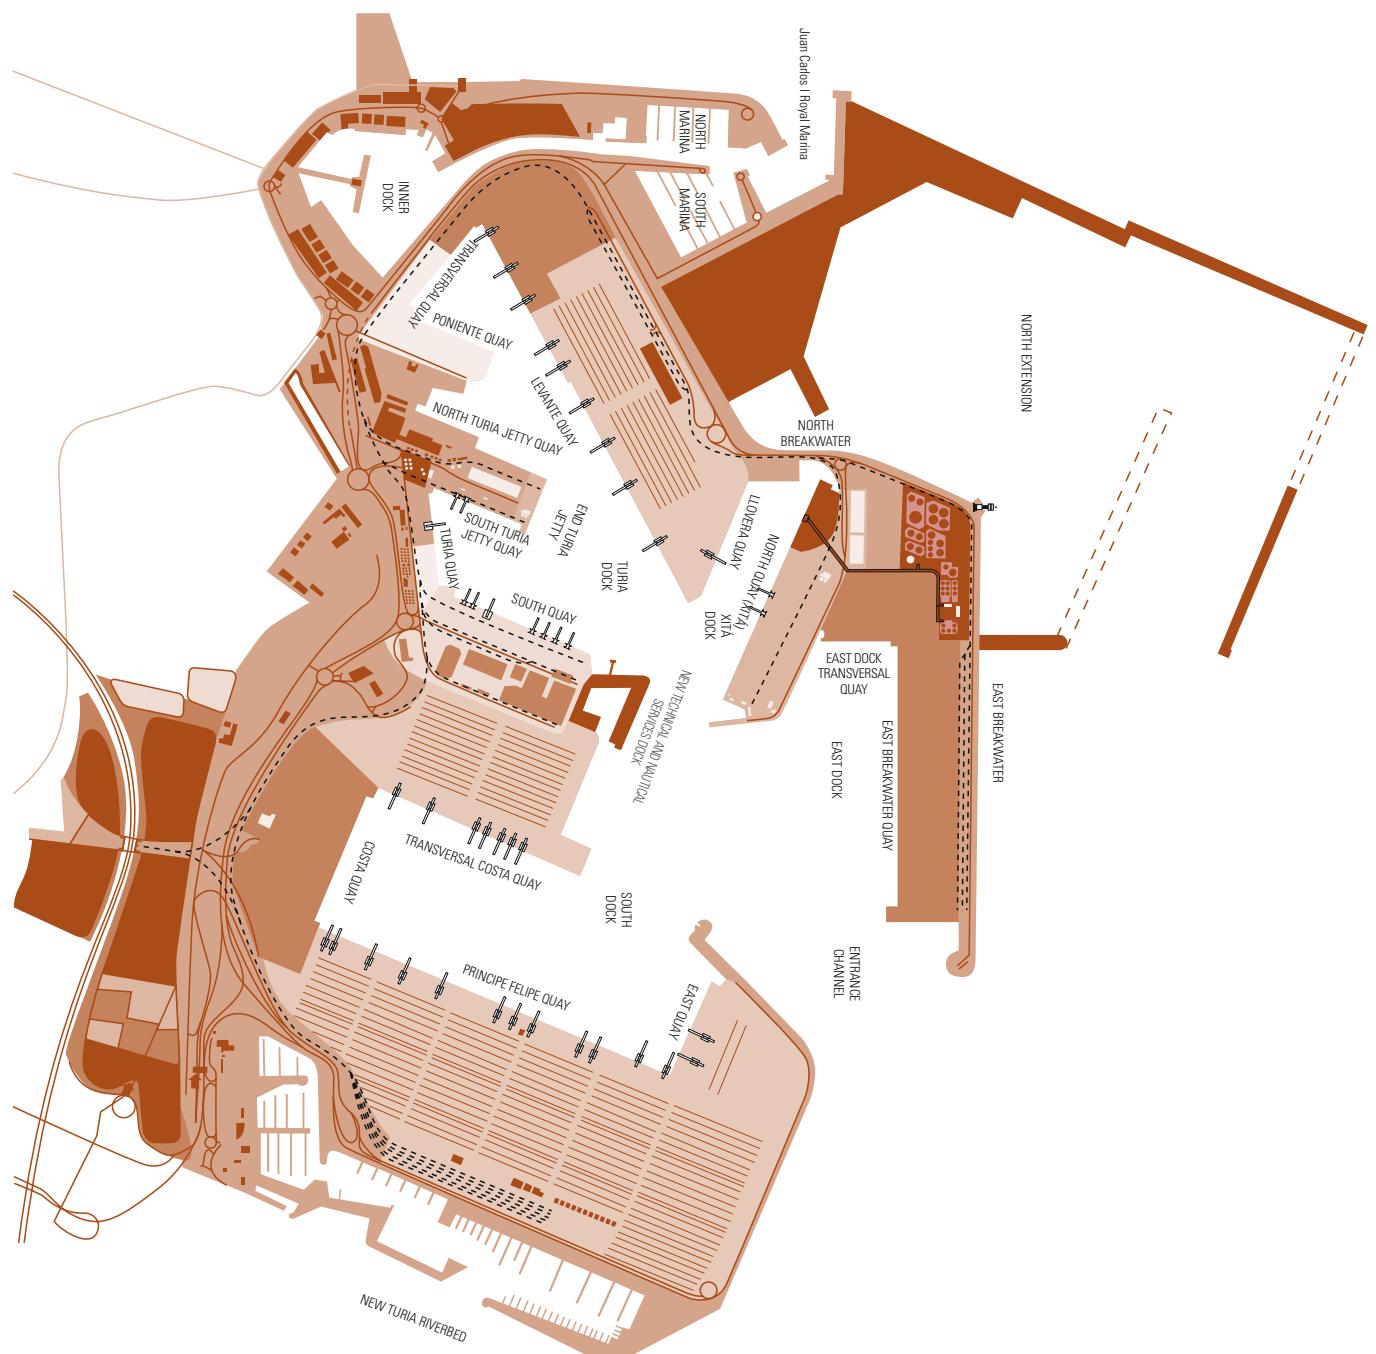

The rail links from the Port of Valencia are as follows:

- Valencia - Barcelona - Port Bou
- Valencia - Saragossa – Basque Country
- Valencia - Cuenca - Madrid
- Valencia - Albacete - Madrid
- Valencia - La Encina - Alicante

These connections go on to other destinations from Alcazar de San Juan (Andalusia), Alicante (Murcia), Madrid (north and northwest Spain, Extremadura).

CAPITAL

A black and white aerial photograph of a bustling port. In the foreground, numerous shipping containers are stacked in organized piles. Two large cargo ships are docked at the port; one on the left and another on the right, both with their cranes extended over the water. In the background, a city skyline with various buildings and a bridge is visible under a clear sky.

6.2 MAJOR INVESTMENTS IN 2009

BREAKWATER CONSTRUCTION FOR THE PORT OF VALENCIA EXTENSION

This project involves building the breakwaters for the future port extension. The main breakwater, which is 3.4 kilometres long in total, consists of two perpendicular faces. The first of these starts at the north end of the Juan Carlos I Marina breakwater and is approximately two kilometres long. The first section is an embankment breakwater whilst the second has vertical sides so that vessels can berth alongside the inner face. The other face is approximately 1.3 kilometres long and has vertical sides.

The project also includes Phase I of the outer sea wall which involves constructing the end face envisaged in the Master Plan and closing it off against the current East Breakwater. The outer sea wall is approximately one kilometre long and is made up of two embankment sides set at an angle of 110°.

In 2009, the embankment breakwater section was finished and the initial caissons for the first perpendicular face were put into place. Once the initial caissons were in place to provide shelter, work started on the outer sea wall.

This project, which is scheduled to be completed in 2011, has a budget of €194.4 million. €65 million of this budget were spent in 2009.

BUILDING WORK ON THE EAST BREAKWATER QUAY

Building work continued during 2009 on the new East Breakwater and Transversal East Breakwater Quays. This primarily involved provisionally paving the quays, installing drainage pipes and laying railway lines for access to the East Breakwater.

Drainage pipes and provisional paving on the Transversal East Breakwater Quay

This is the second paving phase on the new quays. Around 122,000 m² of the quay has been paved with tarmac which is suitable for the ro-ro traffic which will initially be using this area.

A new drainage network for taking rainwater off the new surfaces and removing sewage from the concessions that operated on the disused dock has been installed.

The budget for this project was €8 million. Work was completed in 2009.

Rail access for the East Breakwater

In 2008, work began on the new rail access to the East Breakwater which will provide a connection to the vehicle terminals located there. This involves laying a new 2 km-long track which branches off into 3 parallel tracks of around 1 km in length at the end.

The budget for this project is €4 million. Work is practically finished and will be completed during 2010.

REDESIGNING THE ACCESS ROUTES TO THE NORTH QUAY AND THE TRANSVERSAL EAST BREAKWATER QUAY

The need to provide safe, practical access for the new concessions on the North Quay and the Transversal East Breakwater Quay required the construction of a new roundabout to manage traffic and of a new access road right along the new quayside.

The budget for this project was €1.2 million. Work was completed in 2009.

REMOVAL OF THE PRELOAD FROM THE NORTHEAST PLOT OF THE SOUTH EXTENSION

After this plot had been consolidated, the earth used as the preload to achieve the right gradient for the paving began to be removed so that the plot could be used. This project is being carried out in phases as and when the earth is required for different uses.

The budget for this project is €4.6 million. Work will be completed in 2010.

REINFORCEMENT AND REMODELLING OF THE FIRST SECTION OF THE LEVANTE QUAY

The project involves renewing a 430 metre-long stretch of the first section of the Levante Quay by constructing a block wall between the old and new quays and filling it with gravel backfill. It also includes reinforcing the existing structure of the quay, paving the surface, installing the upper structure and re-laying the container crane rail on the sea side.

The budget for this project is €6.5 million. Work will be completed during 2010.

EXTENSION OF THE LEVANTE QUAY SURFACE AREA

Once all the basic services craft have been relocated to the new Technical and Nautical Services Dock, the existing dock opposite the Llovera Quay, which cannot be used regularly because it is not deep enough and is not the right size, will become available.

The third berthing face, which was started when the Levante Quay extension works began, was extended parallel to the Xità Quay and up to the west apex of the former Scrapyard Quay. This meant the creation of a new berthing face of over 200 metres and an extra 30,000 square metres of surface area and thus completed the Levante Quay's development.

The budget for this project was €9.9 million. Work was completed in 2009.

IMPROVEMENTS TO THE LEVANTE QUAY

Certain improvements need to be made to the Levante Quay as a result of the extension work and of the internal redesign of the concession located on the quay.

Paving work began near the new Llovera Quay and the quay's crane rails were laid. Alongside the internal redesign of the terminal, the paving will be relaid on the new container yard to cater for the new goods and to accommodate the transtainer rails.

The total budget for this project is €6 million. Work will be completed in 2011.

NEW TECHNICAL AND NAUTICAL SERVICES DOCK

The crafts used for providing technical and nautical services at the Port of Valencia are currently moored near the Scrapyard Quay in a dock which is due to disappear with the Levante Quay extension.

All of these craft will then be relocated to a new dock which will house all tug boats, pilot boats, mooring and other technical and nautical services. This will make good use of a relatively shallow area of the port, at the eastern end of the South Dock. This new dock is located at the heart of the commercial docks and is very close to the entrance channel, which will greatly improve tug and pilot boat operations.

The project involved the construction of a 250 metre-long embankment breakwater, and a 200 metre-long and 11 metre-deep berthing face. Lastly, 25,000 square metres of new esplanade were created to house the buildings required for these technical and nautical services.

The budget for this project was €15.9 million. Work was completed in 2009.

SEWAGE NETWORK AT THE PORT OF VALENCIA

This project involves the construction of a sewage network which will carry waste water generated at the Port of Valencia away into the municipal network. This new network has been designed to use a vacuum sewer system which has enormous environmental benefits over traditional gravity systems and will allow greater flexibility for future modifications to the network.

The budget for this project is €5 million. Work will be completed in 2011.

INCREASING DEPTHS IN THE ACCESS CHANNEL AND OUTER BASIN

The access channel at the Port of Valencia currently has a nominal depth of 17 metres. This is considered insufficient because the size of the vessels calling at the port has increased and is expected to increase further in the near future. To accommodate longer, wider vessels with drafts of over 15 metres, the access channel and outer basin need to be 18.5 metres deep. This will improve manoeuvrability for the vessels, reduce the risk of collisions in stormy weather, and avoid vessel propellers churning up the sea bed which causes uncontrolled changes in water depths.

An area of 163 hectares is being dredged along a 3,500 metre stretch of channel and will remove a total of 3 million cubic metres of sand and sediment.

The budget for this project is €13 million and it is scheduled to be carried out over a 12 month period between 2009 and 2010.

MODERNISATION OF THE RAIL NETWORK AND SAFETY IMPROVEMENTS AT CROSSINGS

The Port Authority's commitment to using rail transport has been the driving force behind this project to improve the Port of Valencia's internal rail network. Although the network provided access to all of the port's terminals, the existing infrastructure and operating conditions could not provide a suitable level of service.

A series of improvements are underway, the most important of which are to prevent other traffic from interfering with the railway line so that it is used exclusively by trains, to improve signalling systems at junctions (road signs, road markings and traffic lights), and to mechanise and automate track switching systems.

This work is being carried out in phases. The budget for the project is €5 million and it is scheduled to be carried out during 2009-2010.

NORTHEAST QUAY AT THE PORT OF SAGUNTO'S DOCK 2

Plans for the Northeast Quay alongside the entrance to the old dock at the Port of Sagunto envisage a 14 metre-deep and 300 metre-long quay. The aim is to house several cement terminals.

The construction of a 7 metre-deep quay for mooring basic service craft, such as tug boats and pilot boats, was also included in this project.

A new surface area of around 35,000 square metres has been created thanks to this project.

The total budget for this project was €18.5 million. Work was completed in 2008-2009.

NORTH QUAY AT THE PORT OF SAGUNTO'S DOCK 2

The North Quay 2, which will house a multipurpose terminal, is being constructed by the Port Authority to complete the development of Dock 2. The quay, which is 610 metres long, is being built using floating reinforced concrete caissons. This will create a new 220,000 square-metre esplanade filled using materials obtained from dredging Dock 2.

This project also includes the superstructure, service tunnel, and the fenders and berthing facilities needed for the quay to operate.

The estimated budget for this project is €29 million and work is scheduled to be completed in 2011.

CONSOLIDATION OF THE BULK TERMINAL AREA

Backfill consolidation took place in 2009 on the South Quay on the Port of Sagunto's Dock 2 so that the consolidated land could be handed over to the bulk terminal concessionaire, as agreed in the concession terms and conditions.

€3.5 million were invested in this project.

INTERNAL ROAD NETWORK AT THE PORT OF SAGUNTO

The construction of the new quays at the Port of Sagunto's Dock 2 and the increase in traffic means new roads need to be built at the port and the old roads need to be redesigned.

In 2009, the access roads to the Northeast Quay and to the Services Quay were built. During 2010, the road to Dock 2's outer sea wall is to be widened. The total budget for this project is €2.8 million.

REBUILDING THE SOUTH QUAY AT THE PORT OF GANDIA

Work to rebuild the South Quay at the Port of Gandia involves the construction of a 200 metre-long block wall to widen the current quay by 9 metres, and the construction of a ramp for ro-ro vessels.

The new quay will have a depth of 8 metres and will add an extra surface area of approximately 2,000 m².

The budget for this project is €4.3 million. Work will be completed in 2010.

A black and white photograph of a massive industrial storage tank, likely for liquefied natural gas (LNG), situated at a port. The tank is cylindrical with a large hemispherical top. It is surrounded by a complex network of steel structures, including walkways, ladders, and support beams. In the foreground, a rocky breakwater extends from the bottom left towards the tank. The background shows other industrial buildings and cranes under a clear sky.

The North Quay is currently used for shipping fertilisers from this factory and for general cargo and ro-ro traffic.

The Centre Quay, which is 11.25 m deep, has cold storage facilities to handle perishable goods and ro-ro traffic.

The Centre 2 and South 2 quays are used for new vehicle traffic and to house Toyota's Logistics Centre and the Public Vehicle Terminal.

Fishing dock

This dock has a water surface of 15,000 m², two quays with berthing faces of 140 m and 120 m in length respectively, and a depth of 4 m.

TRANSPORT LINKS

• By road

The Port of Sagunto is linked to the national road network via the CV309 and the V-23 road. These roads lead onto the AP-7 toll motorway and the A-23 motorway which connect the port to the rest of the peninsula.

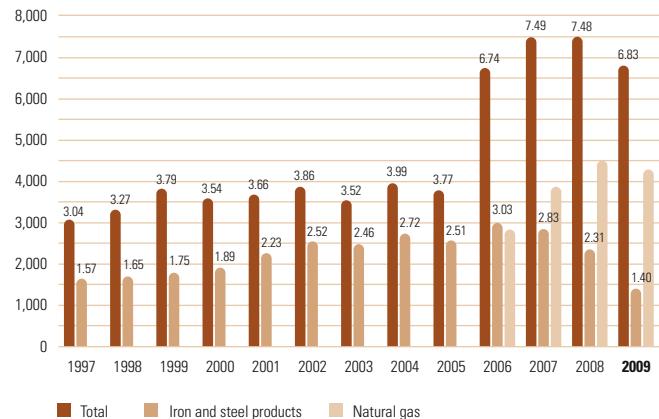

• By rail

The Port of Sagunto has its own rail infrastructure, which belongs to ARCELOR. This joins up to the national rail network via the South Quay.

• Pipeline network

The SAGGAS regasification plant facilities are linked to the Barcelona-Valencia-Bilbao gas pipeline.
