4. Ro-ro traffic and wheeled transport elements

Wheeled traffic at the Port Authority of Valencia can be divided into three categories: passenger vehicles, vehicles as goods, and wheeled intermodal transport units (ITUs). This section also gives a brief outline of Ro-ro goods traffic.

Passenger vehicles

In 2011, the Port of Valencia handled 79,003 passenger vehicles (cars, motorcycles and coaches), which represents an increase of 7.4% compared to 2010.

Vehicles as goods

In 2011, the number of new cars shipped as non-containerised Ro-ro traffic was 380,606 (excluding transit traffic). This represented a decrease of 7.2% compared to 2010. 197,841 of these new cars were exported, the main brands being Ford, Opel, Peugeot, Renault and Iveco Pegaso. The other 133,609 imported vehicles were mainly Toyota, Fiat, Ford and Dacia. Exports fell by 3% whilst imports dropped by 17.6%. The remaining 49,156 cars were domestic traffic to and from the Balearic Islands. This traffic is handled through the ports of Valencia (82%) and Sagunto (18%).

Wheeled ITUs (Intermodal Transport Units)

Wheeled intermodal transport unit traffic went up by 5.6% in 2011 compared with the previous year. The following table shows the figures for 2010 and 2011:

TYPE OF ITUS (UNITS)	2010	2011	DIFFERENCE	%
Articulated lorries	89,302	89,234	-68	-0.08%

Ro-ro tonnes

In 2011, a total of 3,119,119 tonnes of Ro-ro traffic were handled, alongside the wheeled ITUs mentioned above, including the tonnes of vehicles as goods, also described at the start of this section. This represented a 12.5% increase over 2010. Likewise, a total of 31,245 TEUs of Ro-ro traffic were handled in 2011.

5. Transit traffic

Transit traffic in the Port Authority rose by 2.85% in comparison with the previous year to 33,215,151 tonnes. The number of TEUs in transit went up to 2,226,295 TEUs, i.e. a rise of 3.28%.

6. Container traffic

Containers (TEUs)

The number of TEUs went up by 2.86% over the previous year to 4,327,371 TEUs. 1,037,439 TEUs were loaded goods, 1,063,637 were discharged, and 2,226,295 were transit traffic.

7. Rail traffic

The PAV's rail connection ensures access to any production area on the Iberian Peninsula and Europe. There is a two-track railway inside the port premises which branches off to the different quays.

In 2011, 1,748,000 tonnes of goods were transported by rail, of which 1,056,000 tonnes were discharged from vessels whilst 692,000 tonnes were loaded goods. Total land traffic stood at 29,014,000 tonnes (excluding shipping transit and goods transported by pipeline). Thus, rail freight accounted for 6.02% of total land traffic.

8. Goods

Goods traffic is analysed from two different perspectives in this report. The first centres on actual port throughput, i.e. traffic that involves moving goods and passengers within the port premises, including imports, exports, transit, transshipments and goods tares. The second focuses on foreign trade (import/export) as well as domestic traffic.

The Port Authority of Valencia is made up of the ports of Valencia, Sagunto and Gandia. However, for the purposes of this study, the PAV will be taken as a single operating unit. Thus, traffic figures will be accumulated for the three ports, although the port the goods belong to may be indicated where relevant.

PORT TRAFFIC

2.7. TRANSPORT LINKS AND PORT MAPS

2.7.1. Internal transport links and land access

INTERNAL TRANSPORT LINKS

Roads

The port's internal road network is formed by a main perimetric trunk road from which access roads to the various quays branch off.

The main trunk road is a dual carriageway while access roads to the various quays are single two-way roads.

The internal road layout is shown on the corresponding map.

Railways

There is a two-track railway which runs parallel to the main road, and like the road, has tracks branching off to the different quays.

Within the port area, the rail tracks are laid on a ballast bed in some parts and are embedded in concrete in others, depending on whether vehicles need to go over them or not.

The network structure is shown on the corresponding map.

LAND ACCESS

The Port of Valencia is directly linked to national and international road and rail networks.

By road:

The Port of Valencia is connected to the national road network via the V-30 (Valencia bypass).

The V-30 links up directly to the A-7 motorway (Mediterranean motorway) which in turn is directly connected to the other road links in the port's hinterland:

- The V-21 road to the North (Valencia-Sagunto).
- The V-31 trunk road to the South (Valencia-Silla).
- The North-South corridor which includes the A-38 (Valencia-Cartagena) and the A-7 (Barcelona-Algeciras) motorways.
- The East-West corridor centred on the A-3 toll-free motorway (Madrid-Valencia) which connects to the A-43 road to Lisbon, on the stretch near Atalaya.
- The section of the A-7 motorway near Sagunto links up to the A-23 (Sagunto-Somport) toll-free motorway which connects the region with Aragon, Castile-Leon and the rest of the north of Spain. The A-7 near Jativa also links up to the A-35 which accesses the south of Castile-La Mancha.

By rail:

The rail connection from Valencia ensures access to any manufacturing area on the Iberian Peninsula and Europe.

The rail links from the Port of Valencia are as follows:

- Valencia - Barcelona - Port Bou
- Valencia - Saragossa - Basque Country
- Valencia - Cuenca - Madrid
- Valencia - Albacete - Madrid
- Valencia - La Encina - Alicante, which provides connections to go on to other destinations from Alcazar de San Juan (Andalusia), Alicante (Murcia), Madrid (North and Northwest Spain, Extremadura).

6.2. MAJOR INVESTMENTS IN 2011

Breakwater construction for the Port of Valencia's expansion project

This project involves building the breakwaters for the future expansion of the port. The main breakwater, which is 3.4 kilometres long in total, consists of two perpendicular faces. The first of these starts at the North end of the Juan Carlos I Marina breakwater and is approximately two kilometres long. The first section is a rubble-mound breakwater whilst the second has vertical sides so that vessels can berth alongside the inner face. The other face is approximately 1.3 kilometres long and has vertical sides.

The project also included Phase 1 of the outer sea wall which involved constructing the end face envisaged in the Master Plan and closing it off against the current East Breakwater. The outer sea wall is approximately 1 km long and is made up of two faces set at an angle of 110°.

In 2011, all the breakwater caissons were positioned and the rockfill was completed. Likewise, the foot protection blocks were all put into place.

In addition, the entire section of the embankment breakwater's wave wall and of the vertical breakwater were completed, just leaving the wave walls corresponding to the area where the berthing faces join and the end of the breakwater to be finished.

This project, which began in 2008 and was scheduled for completion in 2011, will be extended into 2012 due to the need to carry out additional work which includes laying the service network cables before the roads can be paved. The total budget for the project is €211 million, of which €32.3 million were invested in 2011.

Work on the Technical and Nautical Services Dock

After the Technical and Nautical Services Dock was completed in 2009, work was carried out in 2011 to house the dock's users and a suitable access was created from the South Quay road.

The total budget for this project is €3.1 million, of which €1.4 million was carried out in 2011.

Berthing line for the Transversal Quay

The inner Transversal Quay was joined by a sheet-piling partition which was set back from the quayside, which means it could not be used for vessels to berth. This project involved building a submerged concrete quay 7 metres below sea level in front of the sheet-piling partition on the existing rubble-mound bedding layer to form a continuous berthing line along the inner Transversal Quay.

A new concrete-paved esplanade of around 1,000 m² was also built and fitted out with all the necessary services.

The total budget for this project was €1.3 million. Work began in 2010 and was completed in 2011.

Improvements to the Levante Quay

Certain improvements needed to be made to the Levante Quay as a result of the extension work and the internal redesign of the concession located on the quay.

On one hand, paving work near the new Llovera Quay was completed and the quay's crane rails were laid. Alongside the internal redesign of the terminal, the paving was re-laid on the new container yard to cater for new cargo and to accommodate the transtainer rails.

The total budget for this project was €5.1 million. Work was completed in 2011.

Sewage network at the Port of Valencia

This project involved the construction of a sewage network to carry waste water generated at the Port of Valencia away into the municipal network. This new network has been designed to use a vacuum sewer system which has environmental benefits over traditional gravity systems and allows greater flexibility for future modifications to be carried out.

The budget for this project was €4 million and work was completed in 2011.

Modernisation of the rail network and safety improvements at crossings

The Port Authority's commitment to using rail transport has been the driving force behind this project to improve the Port of Valencia's internal rail network. Although the network provided access to all of the port's terminals, the existing infrastructure and operating conditions could not provide a suitable level of service.

A series of improvements were carried out, the most important of which are to prevent other traffic from interfering with the railway line so that it is used exclusively by trains, improve signalling systems at junctions (road signs, road markings and traffic lights), and mechanise and automate track switching systems.

This work was carried out in phases. The budget for the 2009-2011 project was €5 million. A total of €2.8 million was invested in 2011.

Extension of the Border Inspection Post building

The increased volume of traffic at the Port of Valencia has in turn generated a greater volume of work at the Border Inspection Post. In order to inspect goods correctly, work to extend the facility, which is located next to the Harbourmaster's Office building, began in 2010.

The extension work created four new quays for loading and discharge as well as a new goods inspection area. The facility was also remodelled to increase the number of parking spaces for heavy goods vehicles and improve access to the building.

The budget for the project was €2 million and work was completed in 2011. €1.2 million was invested in the project in 2011.

North Quay at the Port of Sagunto's Dock 2

The North Quay 2, which will house a Multipurpose Terminal, is being constructed by the Port Authority to complete the development of Dock 2 at the Port of Sagunto. The quay, which is 610 metres long, is being built using floating reinforced concrete caissons. This will create a new 120,000 square-metre esplanade filled using materials obtained from dredging Dock 2.

This project also includes the superstructure, service tunnel, and the fenders and berthing facilities needed for the quay to operate.

The estimated budget for this project is €35.2 million and work is scheduled to be completed in 2012. €10.8 million were invested in the project in 2011.

Resurfacing the East Breakwater area

During 2011 resurfacing work was carried out at the East Breakwater area to repair the defects caused by the natural infill settling process of the underlying layers. The road surfaces and slopes will be repaved to improve the operating capacity of the terminals in this area.

This project has a budget of €3 million. A total of €1 million was invested in 2011.

Developing the southern area of the Port of Gandia

The development of the area around the Port of Gandia's Fish Market got underway in 2011 in order to provide all the necessary services and improve the surrounding environment. In addition to paving the area and installing the service networks, street furniture and gardens will also be added.

This project is scheduled to be completed in 2012 and has a total budget of €1 million.

The South Quay is used for importing and exporting steel coil, mainly for the SIDMED iron and steel plant, and also for discharging anhydrous ammonia using special equipment for the Fertiberia fertiliser factory in Sagunto.

The North Quay is currently used for shipping fertilisers to and from this factory and for general cargo and Ro-ro traffic.

The Centre Quay has cold storage facilities to handle perishable goods. It also handles fertiliser traffic, conventional general cargo and containerised general cargo.

Fishing Dock

This dock has a water surface of 15,000 m² and two four-metre deep quays with berthing faces of 140 m and 120 m.

TRANSPORT LINKS

- By road

The Port of Sagunto is linked to the national road network via the CV-309 and the V-23 roads. These roads lead onto the AP-7 toll motorway and the A-23 motorway which connect the port to the rest of the peninsula.

- By rail

The Port of Sagunto has its own private rail network, which belongs to ARCELOR. This links up to the national rail network via the South Quay.

- Pipeline network

The SAGGAS regasification plant facilities are linked to the Barcelona-Valencia-Bilbao gas pipeline.
