JANUARY 2026

THE PORT OF VALENCIA “is ready for hydrogen”.

The **H2PORTS** project, a European initiative promoted by the Valenciaport Foundation, the Port Authority of Valencia and the EU's Clean Hydrogen Partnership, demonstrates that the use of **green hydrogen** in port machinery allows it to operate without polluting emissions or noise, improving air quality without affecting operational efficiency. With this initiative, the Port of Valencia is moving towards the objective of zero emissions and reinforcing its leadership in sustainability and innovation.
