

**ENVIRONMENTAL
MESSAGES**

#137

FEBRUARY 2026

The European **BREEZE** project

supports the decarbonisation of maritime transport in the framework of **Fit for 55**, promoting the implementation of the onshore power supply (OPS) before it becomes mandatory in **2030**.

Through cooperation between European partners, exchange of best practices and technical studies, the project aims to overcome regulatory, technical and economic barriers to OPS.

The **Valenciaport Foundation**, in collaboration with the **Port Authority of Valencia** will develop a guide to operating procedures and a study of energy demand to facilitate efficient compliance with **European regulations** and **reduce emissions** in ports.
