

World Energy Day

ENVIRONMENTAL
TIPS

#8

With the aim of becoming more aware of energy saving, the **Port Authority of Valencia** wants to promote a change in consumer habits, encouraging greater efficiency in the use of energy in order to look after the environment, as part of **World Energy Day on 21 October**

Below, we offer some advice.

4 tips for saving energy

- Don't turn on electrical appliances if you aren't using them.
- This avoids **"vampire draw"** when devices are in standby mode. For this reason, it is recommended that you install power strips with switches that allow you to disconnect electrical appliances from the network.
- Turn off the lights that you don't need and make the most of natural light; lighting represents **20% of energy consumption**.
- If you turn on the air conditioning or heating, make sure windows are closed so that you aren't wasting the generated energy.
