

SAVING THE ENVIRONMENT IS A PRIORITY

The APV is going to implement the selective collection of the organic fraction

And today, with the means we have at our disposal, it is very simple. We just have to properly separate waste.

When we talk about waste, it is important to distinguish between organic fraction and residual waste fraction.

organic fraction

- ✓ Leftovers
- ✓ Remains of infusions and coffee grounds
- ✓ Used napkins, kitchen towels and paper and cardboard soiled with oil or food residues
- ✓ Small gardening waste: plants, leaf litter, flowers...

residual waste fraction

- ✓ All those wastes that do not go in the plastic, paper-cardboard, glass and organic matter containers.
