

3 JULY INTERNATIONAL PLASTIC BAG FREE DAY

ENVIRONMENTAL MESSAGES

#118

July 2022

We should all know by now that a single-use plastic bag takes decades to biodegrade, and releases hundreds of thousands of tiny fragments of microplastics in the process, which according to scientific studies, no longer just end up in our rivers and seas by the atmosphere itself; it's raining plastic all over the world.

In June 2019, the PAV launched the **No Plàstic Campaign** with the aim of eliminating all products composed of this contaminating material from the Valencian port sector. Since then, we have achieved better results every year.
