# **WORLD MIGRATORY BIRD DAY**

Environmental messages

**#121**  
October 2022

To maintain the balance of ecosystems, we need to be aware of the need to protect migratory birds, their habitats and routes.

For this reason, the **APV** carries out bird monitoring in its **Environmental Monitoring Plan (EMP)**.

This **Plan** includes the monitoring of birds' nesting, to ensure it is compatible with port activity.

The **APV**, in collaboration with **Wildlife Service** (Servicio de Vida Silvestre) of the Generalitat Valenciana carries out this monitoring of protected species which nest annually in the **Port of Valencia**, which include **Audouin's gulls, little terns, and common terns, among others.**
