

29 April

# International Noise Awareness Day

The **Port Authority of Valencia** monitors and controls noise emissions from the port environment.

Por un lado, mediante tres **Department of Environmental Policies** has set as a **priority**.

To carry out this monitoring, the **Port Authority of Valencia** has three sound level meters strategically placed at the **port-city** interface, which allow us to analyse the acoustic quality in almost real time. We also have **estatic acoustic maps** for the ports of **Gandia, Valencia y Sagunto**, as well as **predictive acoustic maps** that allow us to conclude that the residential areas closest to the port infrastructures **are not exposed**, due to the activity of the ports, to levels higher than those set out in table A1 of annex III of RD 1367/2007.
