

ENVIRONMENTAL MESSAGES

#135

DECEMBER 2025

Environmental Messages for a Responsible Winter

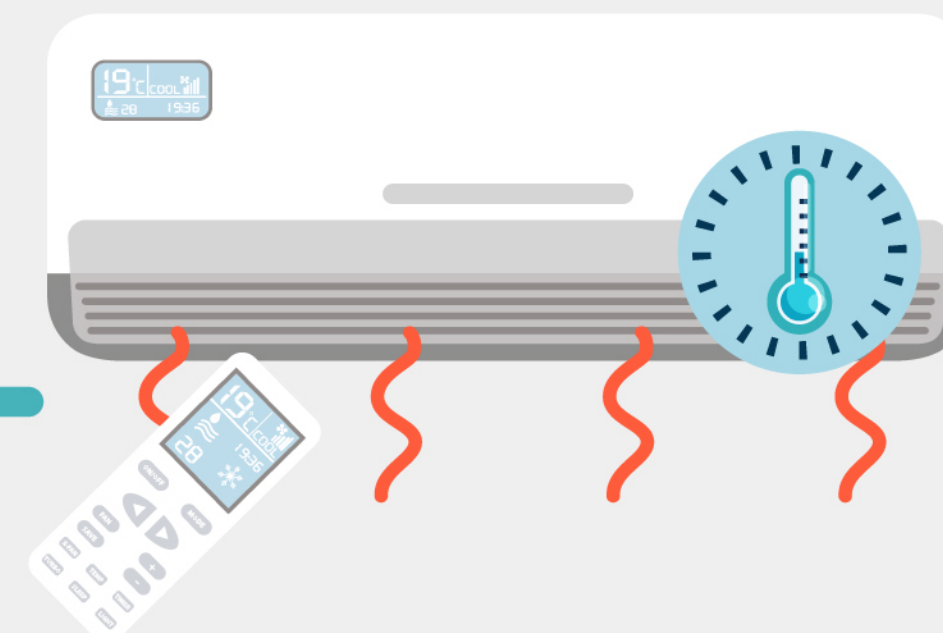

This December, let's fill our celebrations with sustainability.

The Port Authority of Valencia shares an essential recommendation to protect the environment during the winter months:
optimise energy consumption.

Christmas LED lighting:

Choose energy-saving lights for greener decorations.

Adjust Heating:

Lowering the temperature by a few degrees helps to reduce both energy consumption and pollutant emissions.

Power of Daylight:

Keep curtains open to maximise natural light and check that doors and windows are well insulated.

Every action, no matter how small, contributes to building a more sustainable future.

This holiday season, let's adopt habits that care for our planet and those living on it.
