

5 March

World Energy Efficiency Day

ENVIRONMENTAL
ADVICE

#106

We must consciously and responsibly start doing our bit today so that every day there is greater **ENERGY EFFICIENCY**, and the planet will be a better place for everyone. Among the projects currently being developed by the **APV**, it is worth highlighting the **REPLACEMENT OF PUBLIC STREET LIGHTING** with more efficient equipment, as well as the **IMPROVEMENT** of the **APV'S AIR-CONDITIONING PLANT** with the installation of variable flow pumps, significantly reducing electricity consumption.

You can put these simple tips into practice, which will make all the difference.

- Use energy-saving light bulbs (LEDs), as they consume less energy.
- Avoid leaving the lights on if you are not using them.
- Make sure that mobile phone chargers are not left in the socket.
- Turn off all equipment that you are not using, such as computers, televisions...
- Make the most of natural light in our daily activities and thus prevent the excessive use of artificial light.
