

Moving towards Sustainable Transport to Work

The aim is to streamline travel by encouraging the use of sustainable means of transport, whilst ensuring accessibility and sustainable and safe mobility.

- Encourage the use of public transport.
- Promote pedestrian-cycle mobility and electric mobility.
- Improve road traffic management.
- Optimise mobility management in the port premises.

Let's contribute to making the Port of Valencia an emission-free space accessible to all forms of transport: pedestrians, cyclists, public transport, personal mobility vehicles and electric vehicles.
